

WMPI is a family oriented station that takes great pride in the fact that parents need not be afraid of what their children will hear while listening to any of our program material. We are located in a small community and if passed, this would create a large burden both financially and administratively on WMPI. We have, so far, managed to keep from being automated in any way so that we can provide the best community service to our city of license. I fear we would be forced to make cut-backs in our staff in order to pay for this additional "set of ears" that we would never need.

I believe the FCC should act on complaints from the public - there are millions of ears listening - and only require the few offending stations to take on the responsibility of recording their programming. The vast majority of stations (including WMPI) operate in a responsible manner and have the public interest at heart and should not be forced to take on additional responsibility.
